

J4 Systems Cyber Security Recommendations for Wester Hills Water District

Western Hills Water District is looking to bolster their cyber security posture and has asked J4 Systems for a recommendation on services to help them achieve this. After reviewing the current environment and number of users at Western Hills Water District we believe the following should be implemented:

- Microsoft Defender, including Email and Endpoint protection
- Axcient Cloud-to-Cloud Backups for protecting Microsoft 365 data

We have drawn up separate proposals for the cost and labor required to deploy each of these solutions for Western Hills Water District to review.
